

Software

Command Umum Docker, Kubernetes dan Minikube Minikube

- minikube status
- minikube start
- minikube delete --purge (reset ke awal)

Kubectl

- kubectl apply -f .\plato-pod.yaml
- kubectl get pod
- kubectl get deployment
- kubectl get pv (persistence volume)
- kubectl get pvc
- kubectl describe pod xxxx
- kubectl delete pod[/deployment/...] xxxx
- kubectl logs plato-db-deployment-7d585dcf6d-zmjv2
- kubectl exec -it {pod} -- /bin/bash

Error: minikube Unable to resolve the current Docker CLI context "default": context "
Solution: docker context use default

Docker

- docker build . -t {nama image}
- docker push {nama image}
- docker-compose up -d
- docker-compose down -rmi all (hapus semua image)
- docker-compose down -rmi local (hapus image yg dibuild di lokal saja)
- docker container ls (lihat yg up)
- docker container ls -a (lihat semua container)
- docker container logs {id/nama container}
- docker container exec -it {id/nama container} /bin/bas

Unique solution ID: #1022
