

Software

Menambahkan Plugin Gitlab pada OpenProject

- Edit file Gemfile.lock lalu tambahkan
nano /opt/openproject/Gemfile.lock
PATH
remote: modules/gitlab_integration
specs:
openproject-gitlab_integration (2.1.4)
openproject-webhooks
Pada block DEPENDENCIES tambahkan
openproject-github_integration!
openproject-gitlab_integration!
openproject-job_status!
- Edit File Gemfile.modules
clone gitlab modules, lalu pindahkan ke dalam /opt/openproject/modules
(tergantung path instalasi)
git clone https://github.com/btey/openproject-gitlab-integration.git --depth=1
modules/gitlab_integration
nano /opt/openproject/Gemfile.modules
gem 'openproject-gitlab_integration', path: 'modules/gitlab_integration'
- Kalau ada error **ArgumentError in OpenProject 13.0.7(ArgumentError: missing keyword: :permissible_on)**, edit File nano /opt/openproject/modules/gitlab_integration/lib/open_project/gitlab_integration/engine.rb

project_module(:gitlab, dependencies: :work_package_tracking) do
permission(:show_gitlab_content, {})
end
- Lakukan konfigurasi ulang openproject
openproject configure
openproject config:set OPENPROJECT_HTTPS=true
Lalu restart openproject
systemctl restart openproject

Check module apakah sudah terinstall pada aplikasi openproject
(Administration/Plugins)

OpenProject GitHub Integration

Integrates OpenProject and GitHub for a better workflow
