

Cloud Computing

[Error] Binding Failed for port xxxx, please check neutron logs for more information

Symptom

- Tidak bisa membuat VM baru dengan error Binding Failed for port xxxx, please check neutron logs for more information
- Tidak ada error pada neutron server
- Ada error pada log OVN - mismatch with northd version
- Check Agent OVN (pada master) \$ **openstack network agent list** ada yang down

Solution

Pastikan semua node OVN tidak auto update

```
$ sudo nano /etc/apt/apt.conf.d/20auto-upgrades
```

```
APT::Periodic::Update-Package-Lists "0";  
APT::Periodic::Unattended-Upgrade "0";
```

```
ovn-central/0      active  idle  0/lxd/1  192.168.50.29  6641/tcp,6642/tcp  
ovn-central/1*    active  idle  1/lxd/1  192.168.50.27  6641/tcp,6642/tcp  
ovn-central/2     active  idle  2/lxd/1  192.168.50.28  6641/tcp,6642/tcp
```

```
$ sudo ovs-vsctl set open . external_ids:ovn-match-northd-version="false"
```

Note : solusi ini akan aman jika kedepan tidak ada penambahan/update ovn
